

New literature and product releases featured on these pages provide company telephone and facsimile numbers so readers may acquire information about the brochures and products described. Readers may telephone the company to obtain additional information, or they may use the fax service by photocopying the page containing a brochure or product of interest, circling the item, and faxing the photocopy to the number provided. Don't forget to include your own fax number and mailing address so the company contacted can respond with the information requested.

Drilling Fluids

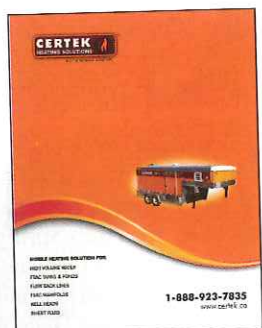

Newpark Drilling Fluids says its corporate brochure describes its focus, capabilities and technology. Products include the new Evolution™ high performance, water-based, clay-free polymer system engineered for harsh conventional horizontals; two high-performance water-based systems and several nonaqueous systems including salt-free invert emulsion systems. In addition, the brochure explains NDF's commitment to fluids innovation and customer service, and highlights strong positions in the United States, Canada, Brazil, Europe, North Africa, Australia, New Zealand and India.

Mobile Heating

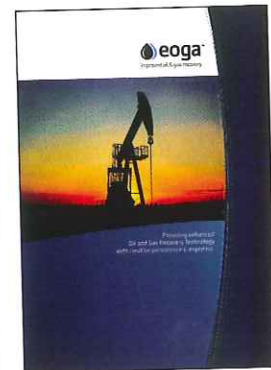

Certek Heat Machine's new corporate brochure kicks off by describing the Certek Heat Machine, a trailer-mounted heating unit that supports remote monitoring and runs off diesel, natural gas, or propane. It then introduces two add-on components the machine enables: the Hotpod, which heats large volumes of water efficiently; and the Hot Orange, a vapor-free, flameless space heater. Finally, the brochure highlights oil field applications for the machine and its accessories, which heat tanks, rigs, completion and production lines, ponds, and other equipment, as well as buildings and pipelines.

Recovery Technology

Eclipse Oil and Gas Associates' brochure describes the company as a leading provider of chemical-based enhanced recovery services. The document EOGA specializes in gel polymers reducing water production from oil wells, and for in-depth conformance control at injection wells, which in reservoir sweep by redistributing and/or carbon dioxide into pre-bypassed areas. The company also offers mobility control polymer and surfactant floods, the brochure adds. It says EOGA can screen, engineer and design EOR projects, as well as provide the equipment, personnel, and products to conduct

Roller Cone Bits

This brochure on Varel International's High Roller™ large-diameter, sealed roller cone drill bits says they combine proven technology from the High Energy™ series with a larger lubricant reservoir to extend bit life and support demanding applications such as directional and rotary steerable drilling. The bits range in diameter from 14 3/4 inches to 18 1/2 inches, and are available with mill tooth or tungsten carbide insert cutting structures. The brochure says their innovations enhance bit life, penetration rates, directional control, and hydraulic efficiency.

Chemical Pumps

Neptune™ Chemical Pump Company's brochure describes its series of hydraulic diaphragm metering pumps. Afters providing tips on pump selection, the brochure highlights their operational advantages. It says these include a reliable oil bypass design that ensures valve performance, and electronic control to adjust flow rate by changing the stroke length manually or through a process instrument. It also details Neptune's double diaphragm with protection, for use where the pumped hydraulic fluid must not contact process fluids.

Rod Guides

R&M Energy Systems says its updated New Era® catalog details advanced rod guides for use with progressing cavity and reciprocating beam pumps. The guides include Pathfinder™, which reduces pressure drops by incorporating channels that allow fluid to flow through rather than around it; Blazer™, designed for high-temperature wells; FAST™, which can be field applied to eliminate taking sucker rods from the site; and Stealth XL™, which provides superior holding power and a high temperature rating.

Bolting Tools

Advanced Torque Products' corporate brochure describes the company's line of mechanical torque wrenches. The digitally controlled wrenches offer torque ranges from 600 to 100,000 foot-pounds, with ±1 percent accuracy even over extreme temperatures, the company says. Also included are drive adapters and mounting hardware, hand-held torque wrenches with drives ranging in size from 1/2 to 3 inches; calibration systems with 12,000 foot-pounds; and strain load cells for torque measurement.
